Mark your calendars for the 13th International Symposium on the Science and Technology of Lighting (LS 13) scheduled for June 24-29, 2012, in Troy, New York, hosted by the Lighting Research Center, the world’s leading university-based research and education organization devoted to lighting.

LS has been held regularly since 1973 and continues to provide a unique opportunity for the worldwide community of engineers and scientists from the lighting industry, research organizations and academia to meet, present and discuss their work on light source research and development.

The LS 13 committee is particularly interested in receiving contributed papers that fall within the following four research categories: legacy lighting systems, solid-state lighting systems, new photometry and colorimetry, and lighting applications.

Contributed paper instructions and other event details will be forthcoming, and an event website is schedule to launch in January 2012. Until then, inquires may be sent to LS13@rpi.edu.

The Lighting Research Center is part of Rensselaer Polytechnic Institute located in Troy, New York, along the scenic Hudson River. Troy is part of New York’s progressive Tech Valley region, where rural charm, urban excitement, and cutting-edge science attract visitors year-round in pursuit of the best in outdoor recreation, arts and entertainment, and world-class research and education facilities.

We look forward to seeing you in June 2012!
