

Can energy-efficient lighting be

# Multi-functional?

## **family room**

- Minimal wattage and a valance fill the space with soft, ambient light
- Saves energy, can be dimmed for effect, and reduces the need to have multiple interruptions in the ceiling

## **fixtures**

- 32 watt T8 fluorescent strip lights by **Bartco**, Electronic Dimming Ballasts by **Lutron** dim to within 5% of full light output

*Dimming saves energy while allowing you to adjust the mood of your room*

## **fireplace**

- Carefully aiming the light to not extend beyond the frame of the mirror makes that object a focal point and the use of halogen lamps adds sparkle to the painted scene

## **fixtures**

- Low voltage recessed adjustable halogens by **Lightolier**, housing 35 watt halogens
