

Small Commercial Lighting Program

Promoting Effective, Energy-Efficient Lighting in New York State

The *New York Energy Smart*SM Small Commercial Lighting Program (SCLP) helps lighting designers and specifiers, lighting contractors, product distributors, and other lighting decision-makers to design and implement lighting improvements in small commercial spaces in New York State.

SCLP provides lighting professionals with financial incentives and educational tools and resources to design lighting systems that are easy to use, are aesthetically pleasing, and enhance the visual capability of people using the space.

SCLP helps lighting practitioners to select technologies properly, and to design and layout lighting systems that result in energy savings while allowing building occupants to work in a pleasing, comfortable environment.

The Lighting Research Center's role in the program is to work with program implementation partner ICF Consulting to:

- Develop educational materials and provide training to program participants
- Provide lighting design assistance to multi-site program participants
- Conduct evaluations of lighting installations developed through the program to ensure that they meet program criteria
- Develop and administer a fully automated, Internet-based project qualification tool that assists program participants to develop lighting designs that meet program criteria
- Develop lighting quality metrics for:
 - Illuminance
 - Color rendering
 - Glare control
 - Lighting uniformity
