

Light and Health Alliance

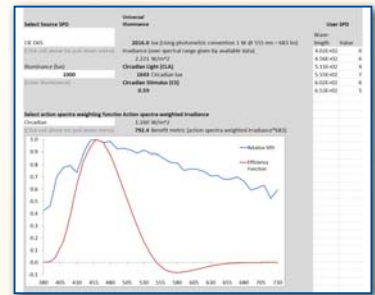

In 2013, the LRC launched a new collaborative initiative—the Light and Health Alliance—to bridge the science of light and health to practical applications, and to provide objective information based on basic and applied research.

Through this collaborative initiative, the LRC conducts evaluations, demonstrations, and research projects to develop practical devices and applications using light to improve people's lives. The Light and Health Alliance provides funding to support education initiatives including the LRC's popular Light and Health Institute, along with conference presentations to educate key audiences and advance attention to light and health.

The Light and Health Alliance's current activities include:

- Development of a specification for a 24-hour lighting scheme for older adults.
- Development of a circadian stimulus calculator (below).

- Construction of a demonstration room designed to model efficient, dynamic lighting systems for modern living environments.
